

Help Prevent the Zika Virus

½ cup of water left outside for 3 days can have over 1,000 Mosquito eggs!!! Even one ounce of water can support mosquito larvae!

Tip and Toss Standing Water!!!

At least once a week, empty and scrub, turn over, cover, or throw out containers that hold water... including vases, pet water bowls, flowerpot saucers, discarded tires, buckets, pool covers, birdbaths, trash cans, and rain barrels.

A good water source for pollinators such as butterflies would be a container of wet sand or circulating water with rocks or marbles where they can perch while drinking.
